

Drum Warming Ovens

These will warm almost any kind of drum and eliminate the need for belts, bands and jackets that can be easily damaged.

Construction

Ovens are manufactured with the exterior painted and a coated steel interior. Stainless steel interior is an option.

Ovens can be 'floor-less' for easy loading by fork lift or with an insulated floor dependent on user requirements and the proposed installation site.

Drum warming oven with insulated floor

Internal Fittings

Heavy duty floor pallet with spillage tray is optional as these ovens can be manufactured to customer specifications also.

Heating

Temperatures up to 175°C are achieved using forced re-circulating hot air to give good temperature uniformity around the drums. All of these ovens have overheat safety protection as standard.

Style

Controls and fans can be sited either at the top or side of the oven, as preferred by the user.

Left:
Smaller drums and containers can be heated in one of our heavy duty bench ovens that can be supplied with a floor stand.

Right:
Floor standing drum warming oven for one 55 gallon drum.

Range

Drum warming ovens can be supplied for warming 1, 2, 4, or 8 standard drums. The 4 and 8 drum models can alternatively hold either one of two totes. They can also be custom designed as required to meet with your specific needs on site.

Please contact us so that we can advise you of the best solution to your warming needs.

Please note that we do not supply drum warming ovens that are spark-proof or ATEX rated.
